

**CORVETTE C6 BRUSHED STAINLESS DOOR GUARDS**  
**PART # C613** Patent Pending  
**INSTALLATION INSTRUCTIONS**

**DO NOT REMOVE PROTECTIVE LINER UNTIL STEP 5**

**!!!!!!VERY IMPORTANT!!!!!!**

1. BEFORE YOU BEGIN YOU MUST FIRST PREP THE DOOR PANEL IN ORDER TO ALLOW ADHESION!!!!. You can do this by scrubbing the entire area first with household isopropyl alcohol. BUT: **(If your door panels have been treated with armor-all or silicone coatings, installation will NOT work unless these treatments have been REMOVED with special chemicals! Check your local auto parts store for a WAX AND SILICONE REMOVER. We recommend a 3M-wax and silicone remover).** If your door has been treated with armor all the household isopropyl alcohol alone will not remove it. You must use a wax and silicone remover. NOTE: Some doors have been treated at the dealerships before you purchased the car. So to be extra safe you may want to use the wax and silicone remover just in case. We can not be responsible for panels' not sticking do to improper door preparation!
2. Once this is done use the adhesive promoter (provided) to wipe the entire area to be covered with your new door panel. Allow a few seconds to dry.
3. Before you remove the red liner for permanent attachment place the door guard into position and check the fit. Your panel comes to you preformed but it maybe necessary to form by hand to insure a nice perfect fit without forcing. Make note of its position. NOTE: Be sure that the points tuck into the door panel and do not protrude.
4. Remove the red liner and carefully reposition the door guard, press firmly on the panel to set. Note: For door panels that had previous treatments that had to be specially removed (step 1), you may want to add panel adhesive to insure a permanent bond. (Liquid nails works great).
5. Remove protective liner. Then repeat steps 1-5 for the other door.

**If any questions occur during installation please contact PFYC.com**  
**Thank you and enjoy your purchase!**

**Note: Care must be taken when cleaning your door guards. It is a good idea to lightly dust your cover with a clean soft cloth first in order to prevent any particles from scratching it. Then wipe (using a new clean soft cloth) with a good quality streak free glass cleaner.**
